

Press release 13th March 2019

Bio-Works is now ISO 9001:2015 certified

During 2018, Bio-Works has updated the quality management system according to the international standard ISO 9001: 2015. The system was fully introduced into the organization in January 2019. Bio-Works has now been audited and approved by an external certification organization, which means that the management system meets the requirements of the standard. The standard is harmonized with EU regulations and certification endorses the company's ability to provide products that consistently meet both customer requirements and applicable legal requirements.

The certification covers product development, production, marketing and sales. By designing a quality management system with a strong customer focus where all processes and routines are carefully designed and quality tested according to international standards, Bio-Works ensures that it continues to deliver products and services in accordance with the requirements that the market demands. The certification is the result of systematic work that must constantly be carried out and prioritized in order to be able to offer products with high customer value.

Mats Johnson, CEO Bio-Works:

"The certification according to ISO 9001: 2015 is another important step in establishing Bio-Works as a reliable and long-term supplier for all our Life Science customers. Many of our customers must comply with various regulatory requirements and therefore require certified suppliers for their production. We know that several existing and potential customers have been waiting for our certification and we expect increased interest in our products. "
